

MERATIVE FLEXIBLE ANALYTICS FOR PROVIDERS

Insights to support the delivery of value-based care

Merative™ Flexible Analytics includes robust advanced analytic methods that can help integrated health systems perform in value-based care arrangements. For over two decades, Merative™ has provided best in class analytics and benchmarking to help health plans, employers and providers optimize care management as well as clinical, physician, financial and utilization performance.

Make your data work for you

As risk shifts to providers in value-based arrangements, health systems are increasingly investing in big data analytics capabilities to help ensure optimal provider performance. However, these investments may still not deliver the information needed to enhance decision making, due to a lack of resources and expertise in data science, business intelligence and program management. In many cases, you may have the data you need but may be struggling to analyze it in a meaningful way.

With Flexible Analytics, you can add time-tested methodologies to your enterprise data warehouse by licensing the analytics you need, when you need them — helping you accelerate time to value. We keep the methods current, so you can reduce the time and resources needed to analyze enterprise data and instead focus on value-added activities with greater impact.

Accelerate time to value and decrease maintenance

Target drivers impacting cost efficiency and contract performance. Leverage analytics that help you measure the cost-effectiveness of care, predict population risk and relative healthcare expenditures, and examine the financial impact of chronic disease progression.

Optimize clinical performance and care management

Stratify your population and evaluate the impact of your care management programs. Analyze services delivered to a patient for treating or preventing health problems. Assess variation in practice patterns with comprehensive profiling of physicians and other providers.

Evaluate the performance of your provider network

Compare performance, drive behavior change and identify focus areas for improvement. Assess factors such as setting of care, prescription drug pricing and utilization, and typical treatments to gain the insights needed to coach providers and optimize costs.

About Merative

Merative is a data, analytics and technology partner for the health industry, including providers, payers, life sciences companies and governments. With trusted technology and human expertise, Merative works with clients to drive real progress. Merative helps clients reassemble information and insights around the people they serve to improve healthcare delivery, decision making and performance. Merative, formerly IBM Watson Health, became a new standalone company as part of Francisco Partners in 2022.
