merative™

Turn healthcare data into actionable insights

Merative™ Flexible Analytics includes robust advanced analytic methodologies that can help organizations close gaps in care, reduce costs without sacrificing quality and address population health. Health plans, providers, and public and private employers can access powerful methods and models to help optimize clinical, financial and program performance.

Make your data work for you

Enterprise analytics are the bridge that can connect claims, clinical and operational data to the critical insights necessary for data-driven decision-making.

Health plans, employers and providers are investing in data management and business intelligence capabilities — but these investments may still not be delivering the information needed to drive business transformation. In many cases, you have the data you need, but may be struggling to analyze it in a meaningful way.

With Flexible Analytics, you can add time-tested methodologies to your existing IT environment by licensing the analytics you need, when you need them — helping you accelerate time to value by reducing the time and resources required to analyze enterprise data and meet the needs of your business operations.

Accelerate time to value and decrease maintenance
Embed analytic content directly into your enterprise data warehouse to help reduce analytic latency and speed time to value. We keep the methods current, so you can reduce the time needed for maintenance and instead focus on value-added activities with greater impact.

Drive analytic efficiencies and mitigate disconnects
Run multiple methods at once to make an efficient use of both professional and technical resources. Leverage interconnected algorithms that build upon and enhance each other for a cohesive and consistent approach.

Meet the business needs of various stakeholders
Expand your analytic capabilities in alignment with business priorities and technology initiatives, including care management, financial analysis, provider performance and account management. Scale as needs shift, without changing your underlying IT infrastructure.

About Merative

Merative is a data, analytics and technology partner for the health industry, including providers, payers, life sciences companies and governments. With trusted technology and human expertise, Merative works with clients to drive real progress. Merative helps clients reassemble information and insights around the people they serve to improve healthcare delivery, decision-making and performance. Merative, formerly IBM Watson Health, became a new stand-alone company as part of Francisco Partners in 2022.
