Introduction

Welcome to the IBM Cúram Social Program Management 8.0.1.0 iFix2 release.

This is a cumulative release which incorporates the Improvements, Resolved Issues and Third Party Updates contained in all previous 8.0.1.0 iFix releases. Details of these Improvements, Resolved Issues and Third Party Updates are included separately in the release notes for each of the previous iFix releases. The release notes for previous releases and the most up to date version of these release notes are available online at the [IBM Support Portal](#).

Full product documentation can be found in the [IBM Documentation](#).

The [IBM Support Portal](#) always contains the most up to date version of these release notes.

To stay up to date with release note changes, security bulletins, and other software support updates, sign up to [My Notifications](#) on the IBM Support Portal.

Installation

Before you run the installer, ensure that all files in your Cúram installation are writable.

The installation steps are as follows:

- Extract the contents of the zip file to a local drive location.
- Run the Cúram installer, which can be found in the INSTALLER folder at that location.
- After installing, the appropriate build targets must be run as necessary for your installation.

Ensure that you install the Merative Social Program Management Platform and application modules in the correct sequence as described in the [Installing Merative Social Program Management](#) topic.

Install the Merative software and supported related software according to the [Installing a development environment](#) instructions in IBM Documentation.

Upgrading

If you are upgrading from a previous version, the IBM Cúram Upgrade Helper contains documentation and tools to help you to upgrade your Cúram application codebase and database to work with your new version of Cúram. The Cúram Upgrade Guide describes a recommended process for performing application and database upgrades. The Upgrade Helper contains tools to assist you with implementing the upgrade, including tools to produce a schedule of required migrations for your upgrade, tools to provide information about database schema changes and tools to generate initial SQL scripts for applying changes to your database.

You can download the appropriate version of the IBM Cúram Upgrade Helper from [IBM Fix Central](#).

Improvements, Resolved Issues, Third Party Updates

[Third Party Updates](#)

Third Party Updates

WorkItem:275788 - Update the version of the Log4j 2 library to the latest version: 2.17.1

Apache Log4j is a Java-based logging utility that is used as the logging provider for the Social Program Management (SPM) product.

The version of the Log4j used by SPM has now been updated from 2.16.0 to 2.17.1. This new JAR file contains some minor bug fixes and enhancements.

As a result of this upgrade, the following changes have been made in the Java Development Environment deliverable.

- CuramSDEJ\lib\third_party_version.properties - the versions of the specified Log4j JAR files have been updated.
- CuramSDEJ\lib\log4j-api-2.17.1.jar - the version of the JAR has been updated.
- CuramSDEJ\lib\log4j-core-2.17.1.jar - the version of the JAR has been updated.
- CuramSDEJ\xmlserver\log4j-api-2.17.1.jar - the version of the JAR has been updated.
- CuramSDEJ\xmlserver\log4j-core-2.17.1.jar - the version of the JAR has been updated.
- CuramCDEJ\lib\ext\jar\log4j-api-2.17.1.jar - the version of the JAR has been updated.
- CuramCDEJ\lib\ext\jar\log4j-core-2.17.1.jar - the version of the JAR has been updated.

Note that before performing any builds or deployments, ensure that the old versions of the log4j-core and log4j-api JAR files are not present in the directories specified above. If they are, they should be removed before proceeding. Any references in custom scripts and other artifacts must be updated to point to the new version of the JAR file as specified above.
