Chapter 1. Removed functionality

If you are upgrading from an earlier version of IBM Cúram Social Program Management, be aware of the features that have been removed from Social Program Management.

For more information about removed features, see the [Release Notes](#).

To assess whether your implementation of Social Program Management has any dependency on the removed features, run the [Artifact Dependencies Search Tool](#).

The following sections list features that have been removed from Social Program Management 8.0.0, alphabetically by name.

Chapter 2. CTI Ant targets and libraries

RTC story 262790 tracks the removal of the Curam Telephony Integration (CTI) Ant targets, libraries, and other CTI references from the IBM Cúram Social Program Management product.

Main changes summary

CTI is a legacy infrastructure that could be used to integrate a telephone system with the Social Program Management application. However, the infrastructure was not used or maintained and, therefore, it is being removed from the product deliverable.

Chapter 7. Non Identical Evidence Mapping

RTC story 265284 tracks the removal of the Non Identical Evidence Mapping feature from the IBM Cúram Social Program Management product.

Main changes summary

The original version of non-identical evidence mapping functionality that supported evidence sharing only where evidence was identical down to the domain definition level is removed. A new version that provides enhanced ability to map evidence with different domains is available.

Detailed changes list

The following pages outline in detail the artefacts removed in this exercise. The files are listed per component and also divided further between the server side changes and client side changes.

Chapter 8. Over and Under Payments Graphical View

RTC story 265280 tracks the removal of the Over and Under Payments Graphical View feature from the IBM Cúram Social Program Management product.

Main changes summary

The Over/Under Payment Graphical View was provided when Cúram Express Rules (CER) was originally introduced to provide a caseworker with a graphical view of over/underpayments generated within a case. However, the view did not meet the customer need in terms of presenting caseworkers with a useful graphical view of information about over/underpayments. It was also not likely to scale well for cases with large volumes of over/underpayments. Therefore, the feature has been removed from the product.
